KR203C Coin & Key Attaching System

Use the KR203C to attach keys or coins

automatically onto a wide variety of paper products

The KR203C mounts onto most KR215 and KR219 label bases and even works with some Cheshire bases. Many types of coins including pennies, nickels, dimes and quarters as well as keys are individually dispensed and attached onto the host using quick-setting hot melt glue. Built-in flexibility means you can replace the vacuum wheel die pads and hopper to run different size coins or keys. A miss feed detection circuit disables the feed system on the head when the host misses feeds.

** Guards may have been removed for clarity; Do not operate machine without guards in place.
